

Portals Connect

Environmental Summary

How We Care

It's a primary concern of ours that we preserve and nurture the environment and our planet. As a global company, our impact on the environment is significant. Which is why we do everything in our power to create a sustainable, green business. Good environmental management is crucial to the continued success of Spacestor and is a concept that we encourage throughout our entire supply chain, as well as within the company itself. Through innovative research and development, we engineer sustainable solutions through clean and harmless processes. We seek to consistently support and strengthen the global community, help create a unique, unforgettable workspace experience and to inspire wellbeing.

Like our supply chain partners, we take our environmental responsibilities seriously; progressively studying and addressing factors such as waste management, the provenance of our timber and reducing the overall carbon footprint of our business. Minimising our environmental impact is a key consideration at every step of the way.

Portals Connect

More than ever, our workplaces are now used for collaboration, face-to-face meetings, brand engagement and culture-building. Great things happen when people collaborate, but the workplace must support various tasks, empowering employees to choose their work location based on the task at hand. Meet Portals Connect - a private space designed to enhance, and optimize the video call experience. Users have full flexibility to personalize every aspect of their environment, including appearance on screen with adjustable spotlights and bias lighting, as well as ventilation and airflow control. An independently adjustable deluxe desk and monitor enable optimal configuration for the most ergonomic video call experience, prioritizing user comfort and confidence. Portals Connect offers plug-and-play functionality with integrated power, screen, and charging options. Available in a wide range of exterior and interior finishes, it also features step-free access to support greater accessibility. Designed to work together, Portals Connect seamlessly sits alongside the wider Portals family to offer a wide variety of work settings that caters to every need.

Environmental Information

% Content of product by weight

Recycling Information*

The clads and table are made from MFC which is an environmentally sustainable product containing over 40% recycled wood and can be recycled at the end of its life as Grade C wood or used as biomass waste in accordance with the biomass regulation.

Camira Blazer fabric consists of 100% virgin wool. The production of virgin wool is generally considered to have a minimal environmental impact. Since wool is derived from animal fibres, it is an inherently sustainable fabric and highly biodegradable. The upholstery foam is made from 100% polyurethane foam which can be recycled and reused by grinding or particle bonding.

All packaging materials we use are fully recyclable. Our foam and polystyrene packing pieces are not currently recycled at kerbside but they can be recycled as LDPE.

*please check with your local authorities for exact information on how to recycle these materials.

Materials		% Content of product by weight*
Cladding	Melamine faced chipboard (MFC - 85% wood mass, 6% water, 9% UF glue, <1% paraffin wax emulsion)	47.3%
Framework & Fittings	Plywood/OSB Metals Plastics & Other	19.5% 23.14% 0.68%
Door	Glass	4.7%
Upholstery fabric (based on a popular example)	Camira Blazer (100% virgin wool)	1.55%
Upholstery foam	Polyurethane foam	3.13%

98%
recyclable

Recyclability (%)

MFC**	100%
Plywood**	90%
Upholstery fabric	100%
Upholstery foam**	100%
Mild Steel	100%
Packaging*	100%

*item can be recycled at kerbside

**if unable to be reused this material can be incinerated to generate energy through biomass disposal

Additional Information

Dedicated manufacturing facilities in the UK and USA provide you with ultimate flexibility in product customization and lead time. Spacestor is ISO9001, ISO14001, FISP, FSC and CHAS accredited - demonstrating our commitment to quality, safety and sustainability.

All materials are locally sourced as much as possible from suppliers who meet high environmental standards.

The majority of our board components meet the emissions limit values of the European formaldehyde class E1 under ECHA (European Chemicals Agency), which means board materials contain a maximum of 0.007% formaldehyde. Our board suppliers have the VOCs in their products tested regularly according to exceed the latest standards. Melamine resin surfaces, laminates and most coatings block emissions from the coreboard. The emissions of these coatings are very low, so overall, the laminated board exhibits far lower values for VOC and formaldehyde emissions than the rawboard. We are now able to offer some products with zero added formaldehyde, and are moving to increase this steadily.

Waste management is under continual reduction and measures are taken to reduce landfill. All waste that can't be used anywhere else is recycled and managed in accordance with legal requirements. And it's not just the waste we produce on site that's recycled; when an installation is complete, all waste and packaging materials removed are returned to be fed into our segregated waste streams.

Our wood waste never goes to landfill. Instead, we burn all our biomass-type waste in our on-site 350kW Ranheat biomass boiler which in turn, provides enough energy to heat our main manufacturing plant and provide hot water for all on-site facilities, eliminating tonnes of CO2 emissions from fossil energy sources, as compared to energy generation using natural gas. Since expanding the capacity of our biomass power plant in 2016, we can proudly say we have not had to purchase gas from the UK network.

Distribution generally occurs between the manufacturing site to the client. Wherever possible, we minimize packaging weight and volume to reduce the carbon footprint of the product during distribution.

Spacestor is dedicated to product longevity. Portals Connect is made with replaceable parts and easily changeable accessories. The product is 98% recyclable by weight and easy to disassemble at the end of life using simple tools.

Product Lifecycle

The background is a vibrant, abstract composition of horizontal bands in various colors including shades of blue, orange, red, yellow, pink, and grey. The bands vary in width and are interspersed with geometric shapes like triangles and rectangles, creating a dynamic, layered effect. The overall palette is bright and modern.
