

## HotLocker

---

### Product Overview

---

To play their part in talent attraction, these lockers need to function smoothly, be design-appealing and support today's technology. Even personal storage may have to be shared to support agile working. Modular, customizable and highly adaptable to design, our lockers can become an extension of your brand throughout the workspace. Available in a huge range of finishes and various low and high-tech locking strategies, they are highly suited to both traditional and agile working styles.

### Dimensions

---

See dimensions online here:

#### Internal dimensions

Lockers have 18" internal depth, and 20½" external

#### Hotbox

Locker needs to be at least 19.7" internal, to fit in a Hotbox

### Environmental Summary

---

During the development journey we always kept our environmental impact in mind. This is demonstrated in the following key features of the design when the HotLockers are purchased with the recommended finishes:

- Product lifecycle – the product is designed to be modular and reconfigurable to cater for future needs without wastage and using more resources.
- FSC certified lumber option available

### Environmental Document & Declare Label

---

### Safety

---

#### Lifting

Product must be handled by 2 operatives.

#### Weight Limit

It is suggested that a weight limit of 120lb per shelf should apply in order to not overload the shelves.

#### General safety

- All maintenance and repair tasks must be performed by appropriately qualified and authorised technicians.
- Only use tools that are appropriate for these tasks.

#### Structural

Adjustable floor glides for leveling come as standard.

#### Seismic

Seismic anchor kits available on request.

### Shipping
